NOTICING NATURE

THE SPOOKY SCIENCE NATURE HUNT

YOUR MISSION: GO OUTSIDE AND LOOK FOR THE WEIRD, WONDERFUL, AND SLIGHTLY CREEPY THINGS NATURE HAS ALREADY MADE.
YOU DON'T HAVE TO FIND EVERYTHING—JUST NOTICE SOMETHING INTERESTING

- Something decomposing
- A fungus growing on something
- A spiderweb
- Evidence that an animal has been nearby—even if you never see the animal
- Something using camouflage
- A strange seed, pod, or fruit
- An insect you can't immediately identify
- Something that looks dead but is actually alive
- Evidence of something that happens at night
- Something that has been chewed on
- A plant with an interesting defense like thorns or spines
- Something you've never noticed before

Bonus Challenge: Find something you can't identify. Don't ask for the answer right away.

1. Take a picture.
2. Look closely.
3. Make your best guess.
4. Then use Seek or another resource to investigate.

Were you right? What did you learn?
